

SecureDoc Disk Encryption Mobile Edition

WinMagic's SecureDoc Mobile Edition is the solution enabling both mobility and peace of mind knowing your data is protected at all times and places.

It provides strong security through solid encryption commencing at pre-boot, backed by the highest level of certifications in the industry. The support of numerous removable storage media like flash cards and microdrives as well as the PDA's system memory, presents a complete, cost-effective solution. SecureDoc's uniform platform allows the integration of all your business devices and is ready for future needs even before they occur.

The transparent and automatic encryption of internal files, databases and memory cards, with no degradation in performance, makes SecureDoc powerful, user-friendly and indispensable for the protection of sensitive data on the go.

Data Protection is Less Costly than Data Breaches

Personal Digital Assistants (PDAs) and smart phones are now essential business tools widely used by an increasingly mobile workforce. The loss or theft of these small devices has also become an everyday reality. Protecting sensitive information on these devices from falling into the wrong hands has become a critical issue no organization can afford to ignore.

WINMAGIC®
DATA SECURITY

Knowing You're Protected

SecureDoc Mobile Edition Unique features

- Strong Encryption

SecureDoc Mobile Edition encrypts data through virtual drive encryption utilizing the AES 256-bit encryption algorithm that offers better performance and greater security than other algorithms.

- Removable Media Encryption

SecureDoc Mobile Edition encrypts flash cards, SD cards, multimedia cards, micro drives and other removable media. All files on removable media are automatically encrypted so data cannot be accidentally exposed to unauthorized users.

- Strong Password Protection

Strong password protection is used to secure encrypted data. There are no symbols used which could leave scratches on the screen revealing a secret pin to an unauthorized user. In addition, versatile key labeling is provided so users can share encrypted files and removable media.

- Secure ActiveSync

Synchronization between the PDA and a PC is protected through a secure password. SecureDoc Mobile Edition can be synchronized with any version of Windows.

- Account Lockout Protection

Accounts can be set up to automatically lockout after a password is entered incorrectly a set amount of times, protecting secured data from brute-force attacks and unauthorized access.

- Feature Rich and Easy to Use GUI

SecureDoc Mobile Edition gives users the security of encryption without complicated installation and configuration processes. SecureDoc installs in the background and encrypts PDAs and removable media transparently so users are not even aware their information is encrypted. The simple-to-use GUI makes

Securing Digital Assets in PDAs and Mobile Devices

SecureDoc Mobile Edition addresses the needs of an organization's increasingly mobile workforce, with more and more data to protect than ever. SecureDoc Mobile Edition enhances and utilizes the versatility and security of WinMagic's award winning SecureDoc Disk Encryption Enterprise Edition.

SecureDoc Mobile Edition offers strong encryption through the 256-bit AES encryption algorithm. The encryption process takes place transparently in the background, invisible to PDA users.

- Virtual disks can be imported, exported, mounted and unmounted giving users greater flexibility.
- Key Management allows users to create their key files and encryption keys similar to SecureDoc Enterprise Edition.
- Secure Boot Logon screen and Screen-Lock are based on SecureDoc's Enterprise Edition features.
- Audit logs are created in the control center for quick viewing. Audit logs keep track of encryption status, login attempts and other tasks performed on the PDA.
